

Intelligent Bills

Mobile & Wireline Spend Management Solutions

Software Co. Case Study

Challenge

A major software developer was challenged on identifying what telecommunication services they were paying for. They had aggressive timelines, limited resources and limited experience to take on this type of task.

Specific Requirements

- Inventory all telecommunication services and equipment for all 100+ sites within 45 Days
- Development of a systematic and streamline control of their inventoried assets
- Reduce expenses through the analysis and elimination of spare and unused equipment/services
- Reduce expense through the elimination of billing errors
- Reduce expense through billing optimization

Solution

Our professionals performed a thorough analysis of the company's diverse network and aligned specific solutions to meet the client's objectives. We performed a Billing Compliance Review to validate the integrity and accuracy of their bills.

Through our Inventory Reconciliation Services, we developed a billed inventory to use as a baseline for doing the comparison against the physical inspections performed at all 100+ sites.

Conducted a study that evaluated a variety of data points of the validated billing to determine all optimization scenarios.

Success, Driven by effective planning and execution.

Results

- Hard and Soft Dollar Savings
- Accurate Inventory at 99%
- 400% Return on Investment on Fees
- 15% Savings through Optimizations
- Complete Visibility into Network Spend
- Actionable Reporting for gained efficiencies and operational effectiveness
